Portfolio: edwardcharles06.github.io

PROFESSIONAL SUMMARY

Computer Science student and Python developer with hands-on experience in game development, data visualization, and web applications, currently interning as a Data Analyst in Unilever Nigeria's savoury supply chain at a major FMCG manufacturer. Proficient in Python, Django, and frontend technologies (HTML, CSS, JavaScript), with demonstrated expertise in data visualization using Matplotlib and Plotly, Git version control, and object-oriented programming. Seeking a remote junior developer or internship role where I can apply my full-stack capabilities to contribute to real projects while continuing to develop professional expertise.

PROFESSIONAL EXPERIENCE

Data Analyst Intern (SIWES) — Unilever Nigeria Plc, Agbara, Lagos

Oct 2026 – Present

- Analyzed production and supply chain data to support decision-making across the savoury division at a major FMCG manufacturer.
- Leveraged production and supply information to enable data-driven insights for cross-functional stakeholders within the supply chain team.
- Completed company induction and onboarding while integrating into established team processes and workflows.

EDUCATION

Yaba College of Technology (YabaTech), Lagos, NG — National Diploma (ND), Computer Science

Present

CERTIFICATIONS

Python Developer Certification – freeCodeCamp (October 18, 2026) · approx. 300 hours · Verify certificate

SKILLS & TECHNICAL COMPETENCIES

Programming Languages: Python 3, JavaScript / TypeScript, Java

Frameworks: Pygame, Django, FastAPI

Data & Analytics: Matplotlib, Plotly, data analysis, data visualization, Excel / Google Sheets

Frontend Specialization: HTML, CSS, JavaScript

DevOps & CI/CD: Git, GitHub, version control, GitHub Actions / GitLab CI

IT Support Tools: Visual Studio Code, Linux terminal

Analytical & Problem-Solving: debugging, problem solving, object-oriented programming, data-driven decisions

Collaboration: collaboration

Skill application highlights:

- **Programming Languages:** Developed backend solutions in Python 3 and JavaScript/TypeScript that processed data for multiple projects; built Java applications demonstrating object-oriented programming principles and design patterns.
- **Frameworks & Libraries:** Created interactive games using Pygame with collision detection and game state management; built Django web applications with database integration and user authentication functionality.
- **Data & Analytics:** Built data visualization dashboards using Matplotlib and Plotly to present insights across datasets; analyzed structured data in Excel and Google Sheets to support data-driven decision making.
- **Frontend Development:** Designed responsive user interfaces with HTML, CSS, and JavaScript that enhanced user experience across web projects; implemented interactive features and DOM manipulation for dynamic web applications.
- **DevOps & Version Control:** Managed project repositories using Git and GitHub with proper branching strategies; automated testing and deployment workflows using GitHub Actions and GitLab CI to ensure code quality.
- **Problem-Solving & Debugging:** Debugged complex code issues across multiple projects using systematic troubleshooting approaches; applied object-oriented programming principles to solve architectural challenges and improve code maintainability.

PROJECTS

- **Alien Space Game** – 2D arcade shooter with a controllable ship, moving fleets, collision detection, scoring and increasing difficulty.
- **Data Visualization** – Generated charts and interactive plots from datasets to surface patterns and trends.
- **Prediction App** – Application that takes user input and returns a prediction based on data.
- **To-Do List Site** – Web app for adding, tracking and completing daily tasks.
- **Web Application** – Full-stack web app with user-facing pages and a database-backed backend.
